Package feature	Web Connect+	eConnect	eConnect+	LTLConnect
API connectivity for low/no touch TMS collaboration: • Real-Time Rating • Spot Market • Billing (Rate Change Request) • Communications (Load) API See below for options to purchase applicable implementation services for additional APIs or SCACs/VATs as needed.			✓	Includes Real-Time Rating for LTL shipments, Spot Market, Billing and Communication APIs.
Optional premium marketing package available for purchase			✓	
New EDI implementation services (if needed) per SCAC/VAT		$3,000	$3,000	$3,000
New real-time rating API implementation services first SCAC/VAT Shippers request bids when applying a routing guide or shopping for rates from carriers. The TMS pings the carrier's endpoint and expects an instant response. If not already using version 11 of the e2open Transportation Management for shippers EDI 204 (Load Tender) message, the carrier has the option to upgrade to that version to receive, in the L11 segment of the 204, the unique bid identifier that was submitted with the related bid via the Real-Time Rating API.			$4,125	$4,125
New spot market API implementation services first SCAC/VAT Shippers post loads to the SpotMarket to retrieve bids on loads that they need covered. Carriers will ping the e2open endpoint to retrieve all available SpotMarket postings and then choose the postings for which they want to submit bids.			$4,125	$4,125
New billing (rate change request) API implementation services first SCAC/VAT Carriers can request rate changes to add accessorials or modify base rates by submitting requests via integration. This allows carriers to post requests to an API endpoint to add, remove, or modify changes for a rate change request or request a base rate adjustment. Carriers can only submit requests for loads tendered to their company, and shippers' rate change request rules are enforced.			$4,125	$4,125
New communications (load) API implementation services first SCAC/VAT Integrates a range of load functionality, including the retrieval and addition of load notes as well as the retrieval of current rate, stop ID, dates, and lading quantity. The load note functionality specifically works by allowing carriers to retrieve and add notes to a load and post load documents.			$4,125	$4,125
New API implementation services per additional SCAC/VAT			$1,000	$1,000

Drive Efficiency and Cost Savings with API Integration from e2open

Learn more how API Integration can unlock new business opportunities

In today's world, business moves in real time, and it helps to have any advantage you can. Shippers and carriers alike can find that advantage with API Rating from e2open. Take a look at some of the incredible benefits your business stands to gain.

FOR SHIPPERS
What are the benefits for shippers?

Access to high-performing carriers
Our platform **connects shippers with Platinum, Gold, or Silver carriers** who are performing well for other shippers on the e2open TMS application.

Access to carriers with EDI and API integrations

- Create reusable connections so you don't have to re-onboard carriers
- Shippers who adopt Real-Time Rating (RTR) with their carriers save time and effort finding coverage for difficult or infrequent lanes and find capacity and get rates quickly without phone calls and emails
- Having flexible integration capabilities with carriers provides more timely responses holistically (Rate Change Request [RCR], documents, communication/load notes)
- Access instant rate quotes and market-price backup carriers in the waterfall
- More timely responses from integrated carriers to tenders
- Increased response to spot market postings

FOR CARRIERS
What are the benefits for carriers?

For carriers who want to streamline their operations and increase efficiency, e2open's API integrations enable you to:

- Provide instant rate quotes to your shippers via Real-Time Rating (RTR)
- Automate the spot market bidding process and increase response rate up to 60%
- Eliminate manual processes throughout the tender's lifecycle, including communication and rate change requests
- Automate document exchange between systems for PODs, BOLs, and claims
- Loads can be updated and closed more efficiently for settlement

Ready to level-up your logistics?

In the crowded and competitive field of logistics, it helps to watch every penny and every process in your operations. With API integrations from e2open, the technology does the heavy lift.

If you're ready to start increasing efficiency and increasing cost savings, **visit the Marketplace** to learn more about the available subscription levels, and to read through our FAQs.
